# Asset Liability Management cum Risk Management Policy

In order to address the risks in NBFC Company in a structured manner, the adoption of comprehensive Asset-Liability Management (ALM) practices is inevitable. ALM, among other functions, is also concerned with risk management and provides a comprehensive and dynamic framework for measuring, monitoring and managing liquidity and interest rate equity and commodity price risks of major operators in the financial system that needs to be closely integrated with the NBFC's business strategy.

Having understood the significance of sound ALM practices Company hereby proposed to lay down broad guidelines in respect of interest rate and liquidity risks management systems in Company, which form part of the Asset Liability Management (ALM). The initial focus of the ALM function would be to enforce the risk management discipline i.e. managing business after assessing the risks involved.

The ALM process rests on three pillars:

- ALM Information Systems
- Management Information Systems
- Information availability, accuracy, adequacy and expediency
- ALM Organisation
- Structure and responsibilities
- Level of top management involvement
- ALM Process
- Risk parameters
- Risk identification
- Risk measurement
- Risk management
- Risk policies and tolerance levels.

## 5. ALM Information Systems

5.1 ALM has to be supported by a management philosophy which clearly specifies the risk policies and tolerance limits. This framework needs to be built on sound methodology with necessary information system as back up. Thus, information is the key to the ALM process. There are various methods prevalent world-wide for measuring risks. These range from the simple Gap Statement to extremely sophisticate and data intensive Risk Adjusted Profitability Measurement methods.

However, though the central element for the entire ALM exercise is the availability of adequate and accurate information with expedience; and the systems existing. Adequate measures are to be taken to collect accurate data in a timely manner through full scale computerisation.

### 6. ALM Organisation

6.1

- a) Successful implementation of the risk management process would require strong commitment on the part of the senior management in the company, to integrate basic operations and strategic decision making with risk management. The Board of Directors lead by Chairman and Managing Director will have overall responsibility for management of risks and should decide the risk management policy of the NBFC and set limits for liquidity, interest rate and equity price risks.
- b) The **Asset Liability Committee (ALCO)** consisting of following members should be responsible for ensuring adherence to the limits set by the Board as well as for deciding the business strategy of the company (on the assets and liabilities sides) in line with the company's budget and decided risk management objectives.

Asset Liability Management Committee

Name of Director	Designation	Category
Mr. Mukul Somany	Chairman	Promoter
Mr. Alok Jalan	Member	Non Promoter
Mr. Narain Das Maheshwari	Member	Non Promoter

- c) The ALM Support Groups consisting of operating staff should be responsible for analysing, monitoring and reporting the risk profiles to the ALCO. The staff should also prepare forecasts (simulations) showing the effects of various possible changes in market conditions related to the balance sheet and recommend the action needed to adhere to Company's internal limits.
- 6.2 The ALCO is a decision making unit responsible for balance sheet planning from risk return perspective including the strategic management of interest rate and liquidity risks. The business and risk management strategy of the company will ensure that the company operates within the limits / parameters set by the Board. In addition to monitoring the risk levels of the company, the ALCO should review the results of and progress in implementation of the decisions made in the previous meetings. The ALCO would also articulate the current interest rate view of the company and base its decisions for future business strategy on this view. In respect of the funding policy, for instance, its responsibility would be to decide on source and mix of liabilities or sale of assets. Towards this end, it will have to develop a view on future direction of interest rate movements and decide on funding mixes between fixed vs floating rate funds, wholesale vs retail deposits, money market vs capital market funding, domestic vs foreign currency funding, etc.

The frequency of holding their ALCO meetings will be quarterly. However, if the need be for a meeting at a short notice, the ALCO meet at a shorter notice.

## 6.3 Board of Directors Meetings and Review

The Board of Directors, in their board meetings, will oversee the implementation of the system and review its functioning annually.

W

#### 6.4 ALM Process:

()

The scope of ALM function can be described as follows:

- · Liquidity risk management
- · Management of market risks
- · Funding and capital planning
- · Profit planning and growth projection
- Forecasting and analysing 'What if scenario' and preparation of contingency plans

The guidelines given in this note mainly address Liquidity and Interest Rate risks

7. Liquidity Risk Management

- 7.1 Measuring and managing liquidity needs are vital for effective operation of company. The importance of liquidity transcends individual institutions, as liquidity shortfall in one institution can have repercussions on the entire system. ALCO should measure not only the liquidity positions of company on an on-going basis but also examine how liquidity requirements are likely to evolve under different assumptions. Experience shows that assets commonly considered as liquid, like Government securities and other money market instruments, could also become illiquid when the market and players are unidirectional. Therefore, liquidity has to be tracked through maturity or cash flow mismatches. For measuring and managing net funding requirements, the use of a maturity ladder and calculation of cumulative surplus or deficit of funds at selected maturity dates is adopted as a standard tool.
- 7.2 The Maturity Profile based on ALM could be used for measuring the future cash flows of company in different time buckets. The time buckets, may be distributed as under
- i) 1 day to 30/31 days (One month)
- ii) Over one month and up to 2 months
- iii) Over two months and up to 3 months
- iv) Over 3 months and up to 6 months
- v) Over 6 months and up to 1 year
- vi) Over 1 year and up to 3 years vii) Over 3 years and up to 5 years
- viii) Over 5 years
- As Spotlight Vanijya Limited does not hold public deposits, all the investment securities would fall in the category of 'non-mandatory securities'. All non-mandatory securities may be kept in buckets of future time frame for the purpose of determining their cash flows based on maturity of such security and intention of holding such security till the time of such maturity
- 7.4 The policy note recorded by the company on treatment of the investment portfolio for the purpose of ALM and approved by their Board/ALCO should be forwarded to the Regional Office of the Department of Non-Banking Supervision of RBI under whose jurisdiction the registered office of the company is located
- 7.5 Within each time bucket, there could be mismatches depending on cash inflows and outflows. While the mismatches up to one year would be relevant since these

provide early warning signals of impending liquidity problems, the main focus should be on the short-term mismatches viz., 1-30/31 days. Company, however, is expected to monitor its cumulative mismatches (running total) across all time buckets by establishing internal prudential limits with the approval of the ALCO. The mismatches (negative gap) during 1- 30/31 days in normal course may not exceed 15% of the cash outflows in this time bucket

7.6 The **Statement of Structural Liquidity** shall be prepared by placing all cash inflows and outflows in the maturity ladder according to the expected timing of cash flows. A maturing liability will be a cash outflow while a maturing asset will be a cash inflow. While determining the likely cash inflows / outflows, company will have to make a number of assumptions according to their asset - liability profiles. While determining the tolerance levels, the company may take into account all relevant factors based on their asset-liability base, nature of business, future strategy, etc.

7.7 In order to enable the company to monitor their short-term liquidity on a dynamic basis over a time horizon spanning from 1 day to 6 months, company will estimate their short-term liquidity profiles on the basis of business projections and other commitments for planning purposes. An indicative format ALM – I issued by RBI for estimating **Short-term Dynamic Liquidity** will be used for the said purpose.

#### 8. Currency Risk

The company does not have any currency risk as of now as there are no transactions entered by the company which will involve currency risk. However, in future, if such transactions are entered into, the company will take appropriate steps to modify this policy and incorporate measures to check currency risk.

9. Interest Rate Risk (IRR)

9.1 The operational flexibility given to NBFCs in pricing most of the assets and liabilities imply the need for the financial system to hedge the Interest Rate Risk. Interest rate risk is the risk where changes in market interest rates might adversely affect an NBFC's financial condition. The changes in interest rates affect company in some way. The immediate impact of changes in interest rates is on company's earnings (i.e. reported profits) by changing its Net Interest Income (NII). As such Spotlight Vanijya Ltd. is into funding of loans which are always fixed rate loans. The loans borrowed from banks are mostly at floating rates. The company manages this risk on NII by pricing its loan products to customers at a rate which cover interest rate risk. The risk from the earnings perspective can be measured as changes in the Net Interest Income (NII) or Net Interest Margin (NIM). Measurement of such risk is done at the time of deciding rates to be offered to customers. Once interest rate risk is measured by the ALCO, lending rates are finalized. RBI has prescribed ALM – III for the purpose of Interest Rate Risk Monitoring and company may use the same for the purpose of measurement and monitoring of interest rate risk.
